16 October 2026

Dear Hiring Team,

I am applying for the Project Management Specialist II position. Honeywell is a name I have known for years from the process automation field, and working on its projects in this region is a step I would really like to take.

For almost five years I have worked on the product side of industrial automation, developing process instrumentation and automation controllers. My work covered the full path of a product: defining requirements, development, testing, handing it over to production and supporting it in the field. Along the way I worked closely with customers, production and quality teams and suppliers.

That is the part I want to grow. I would like to take on a role that combines my technical background with project responsibility: planning, keeping scope and schedules on track, and being the person customers and suppliers can rely on. I am also comfortable working with data and numbers (Excel, Power BI, SQL), and I am confident I can build on that for the commercial side, such as budgets, cost tracking and forecasting.

I think my background helps here. I understand the equipment, the test processes and the problems that come up on site, which makes it easier to follow the technical details and keep a project moving. I am also happy to travel across Turkey and the other countries the role covers.

Thank you for your time. I would be glad to talk further.

Kind regards,

Hüseyin Felek
